Education

Bachelor of Technology (B.Tech) in Computer Science

KIET Group of Institutions

Sep 2024 – Present

Ghaziabad, Uttar Pradesh | CGPA: 8.80/10.0

Intermediate (Class XII)

S.S.J.S.N. College

2022 – 2023

Jharkhand | Percentage: 81.8%

PROFESSIONAL SUMMARY

Computer Science undergraduate skilled in React.js, Next.js, Node.js, Express.js, MongoDB, and JavaScript. Experienced in building full-stack web applications, REST APIs, and responsive user interfaces through projects and hackathons. Passionate about creating scalable solutions and continuously learning modern web technologies.

TECHNICAL SKILLS

Languages: Python, C++, JavaScript (ES6+), SQL, Dart

Frontend: HTML5, CSS3, React.js, Next.js, Vite, Responsive Web Design

Backend: Node.js, Express.js, REST APIs

Databases: MongoDB, MySQL

Machine Learning & Data Analysis: Pandas, NumPy, Matplotlib, Scikit-Learn, EDA, Feature Engineering, Linear Regression

Tools: Git, GitHub

Concepts: Data Structures & Algorithms, Object-Oriented Programming (OOP)

PROJECTS

CitySpark Community Issue Reporting Platform | React.js, Node.js, Express.js, MongoDB | Apr 2026 – May 2026

- Built a community-driven platform enabling citizens to report and validate local civic issues before escalation to authorities, reducing misinformation.
- Implemented authority workflow management, allowing senior officials to assign tasks, track resolution progress, and monitor accountability.
- Developed an interactive map-based dashboard for real-time issue visualization and status tracking across locations.
- Integrated an AI-powered assistant to help users report issues and access civic information efficiently.

Quiz Application Full Stack Website | React.js, Node.js, Express.js, MongoDB | Jan 2026 – Mar 2026

- Developed a full-stack quiz management platform enabling educators to create custom quizzes and distribute them through unique access codes.
- Implemented automated evaluation and real-time result generation, providing instant performance reports to both students and instructors.
- Built an assessment management system allowing instructors to review submissions, update question scores, and recalculate results dynamically.

House Price Predictor Machine Learning Project | Python, Pandas, NumPy, Scikit-Learn, Matplotlib | Dec 2025 – Jan 2026

- Built a regression-based machine learning model to predict house prices using Kaggle dataset.
- Performed data cleaning, missing value treatment, EDA, and feature engineering to improve model accuracy.
- Implemented Linear Regression and evaluated model performance using R2 Score and RMSE.
- Visualized market trends and feature relationships using Pandas, NumPy, and Matplotlib.

HACKATHONS LEADERSHIP

Team Lead | IIT Delhi Hackathon

Mar 2026

- Led a team in developing an AI-powered agent for the social deduction game Among Us during a national-level hackathon.
- Designed decision-making logic and game-state analysis strategies, enabling the agent to consistently survive and progress through multiple rounds.
- Managed task allocation, integration, testing, and final prototype delivery under strict deadlines.

Team Member | INNOTECH Technical Fest, KIET

Nov 2025

- Co-developed CitySpark, a community-driven civic issue reporting platform connecting citizens with government authorities.
- Implemented a community validation workflow to improve the reliability of reported issues and reduce misinformation.
- Contributed to the design of interactive issue tracking, map-based visualization, and AI-assisted citizen support features.
